THE

AMERICAN JOURNAL
OF
SCIENCE AND ARTS.

CONDUCTED BY

PROFESSORS B. SILLIMAN AND B. SILLIMAN, JR.,
AND
JAMES D. DANA.

SECOND SERIES.

No. 23.—SEPTEMBER, 1849.

NEW HAVEN:

PRINTED FOR THE EDITORS BY B. L. HAMLEN,
Printer to Yale College.

Sold by L. W. FITCH, New Haven.—LITTLE & BROWN, and T. WILEY, Jr., Boston.—
C. S. FRANCIS & CO., GEORGE P. PUTNAM, and JOHN WILEY, New York.—CAREY &
HART, Philadelphia.—T. DELF, 142 Strand, London.—HECTOR BOSSANGE & CO., Paris.
—NESTLER & MEILLE, Hamburg.

The postage on this Journal to any distance is 9½ cts.

III. ZOOLOGY.

1. *Conspectus Crustaceorum quæ in Orbis Terrarum Circumnavigatione, Carolo Wilkes e Classe Reipublicæ Fæderatæ Duce, lexit et descripsit JACOBUS D. DANA*—(Proceedings of the American Academy of Arts and Sciences, Boston, May 4, 1847, vol. i, p. 150–154, and Nov. 8, 1849, vol. ii, pp. 9–61.)—This Conspectus includes descriptions of 183 new species of Entomostraca, collected by Mr. James D. Dana during the cruise of the Exploring Expedition. We here cite the descriptions of the genera and families introduced, as they contain some modifications of those received, and mention only the names of the new species included in the Conspectus under each genus. As elsewhere stated, the full Report on the Crustacea of the Expedition is in course of preparation and will be illustrated by drawings of these and the other new species collected.

ORDO 2. ENTOMOSTRACA.

SUBORDO 1. GNATHOSTOMATA.*

Tribus I.—CRUSTACEA CYCLOPACEA (vel Copepoda).†

Familia I. CYCLOPIDÆ.

Oculi duo simplices tantum. *Palpi* mandibularum maxillarumque breves aut obsoleti. *Sacculi ovigeri* duo.

Genus I. CYCLOPS.—*Antennæ maris anticæ* subcheliformes aut articulo geniculante instructæ.

Sp. C. brasiliensis, curticaudus, pubescens, MacLeayi, vitiensis.

* See this Journal, 2nd Ser., i, 225.

† Cyclopaeorum membra sunt:—

Cephalothorax 4–7-articulatus. *Abdomen* 1–6-articulatum, carapace non tectum.

Frons saepissimè rostrata, rostro aut simplee, aut furcato, aut transversim emarginato, aut appendicibus instructo.

Oculi duo simplices, pigmento aut connati aut disjuncti; quoque in quibusdam oculi duo coaliti sub capite insistentes; aliis, oculi maximo lenticulo prolato et cornea latè oblatâ constructi.

Antennæ anticæ 4–28-articulatae, aut simplices, aut appendiculatae; *posticæ* 2–5-articulatae et saepè ramum ferentes, aliis ad apicem setigeræ, aliis subcheliformes.

Mandibulae ad apicem dentatae, saepius palpigeræ:—membra cephalothoracis ad normam quarta; itaque breviter denominata et. iv.

Maxillæ duæ (et. v.) setosæ; saepè palpigeræ, palpo sive parvulo et vix discernendo, sive setas diffusas ferente.

Maxillipedes (vel Maxillæ, et. vi.) duo, aliis parvi et parcii setigeri, aliis crassiores et valde setigeri.

Pedes antici (et. vii) duo simplices, aut obsolescentes aut elongati, aliis setigeri, aliis subcheliformes.

Pedes hirenes decem (et. viii, ix, x, xi, xii); octo anteriores saepius natatorii, sed duo antici interdum subprehensiles; duo posteriores plurimum obsoleti aut parvuli; in quibusdam masculinis pergrandes et uno ambove prehensiles.

Abdominis ad basin pertinentes saepissimè *pedes spurii*, sive obsolescentes sive oblongi et setis armati; ad extremum, styli caudales duo, unusquisque 4–6 setis plerumque plumosis instructus.

Cephalothorace septem-articulato, ad segmentum primum antennæ quatuor pertinent; ad secundum, mandibula, maxillæ, et maxillipedes (et. iv, v, vi); ad tertium,

Familia II. HARPACTIDÆ.

Oculi duo simplices tantum. *Palpi* mandibulorum maxillarumque parvuli, aut obsoleti, setis diffusis non instructi. *Sacculus ovigerus* unicus. *Antennæ posticæ* setis habitu digitorum ad apicem instructæ.

Genus I.—HARPACTICUS. (*Milne Edwards.*)—*Frons* subrostrata, appendicibus nullis. *Antennæ anticæ maris* subcheliformes, aut articulo geniculante instructæ; *feminæ* basi 2–5 articulatæ et quasi flagello curto sœpius minutè 5-articulato compositæ, ad apicem basis appendicem brevem ferentes. *Cephalothorax* 4-articulatus. *Pedes antici* subcheliformes mediocres.

Syn.—Arpacticus, et Cyclopsina partim (*C. castor* excluso), *M. Edwards.*—Nauplius, *Philippi.*—Canthocarpus, *Westwood.*—Doris, *Koch.*—Canthocarpus et Arpacticus, non Cyclopsina, *Baird.*

Sp. *H. virescens*, concinnus, sacer, linearis, roseus, acutifrons.

Genus II. CLYTEMNESTRA. (*Dana.*)—*Frons* subrostrata, appendicibus nullis. *Antennæ anticæ flexiles*; *maris*, non subcheliformes. *Pedes antici* (ct. vii,) permagni, subcheliformes.

Obs. Non *Arpacticus* Bairdii: *Cyclops chelifer* Arpacticis pertinet. Magnitudo pedium anteorum character genericum non bene validum, nisi pedes pergrandes, quoque pro antennis geniculatis in coitu usitati sunt; ideoque est antennæ *maris* Clytemnestrae non subcheliformes.

Sp. *C. scutellata*.

Genus III. SETELLA. (*Dana.*)—*Corpus* angustissimum fere lineare, anticè attenuatum et subacutum, et fronte appendices duas parvulas falciiformes subtus gerens. *Antennæ anticæ flexiles*, appendice brevi instructæ, setis brevibus; *maris* non subcheliformes. *Pedes antici* (ct. vii) mediocres aut parvi. *Pedes proximè sequentes* lateraliter porrecti, ad apicem breviter setigeri. *Pedes abdominis* elongati et longè setigeri. *Setæ caudales* duæ longissimæ, (in speciebus scrutatis corpore valde longiores, spinulosæ, et strictè appressæ,) reliquæ brevissimæ. (Tubum cibarium sœpius lœtè rubrum.)

Sp. *S. tenuicornis*, longicauda, gracilis, crassicornis, aciculus.

Familia III. CALANIDÆ.

Oculi simplices; etiam sœpe alii duo inferiores deorsum spectantes. *Pedes mandibulares maxillaresque* articulati et longè setigeri. *Sacculus oviger* unicus. *Antennæ anticæ elongatæ*, non appendiculatæ. *Antennæ posticæ* ad apicem setigeræ.

Genera notis sequentibus distinguenda:—

pedes quatuor antici (ct. vii, viii); (cephalo-thorace quadri-articulato, hæc tota adhuc enumerata ad segmentum anticum pertinent;) ad segmenta sequentia, singulatim, duo pedes biremes, (ct. ix, x, xi, xii).

Mandibula est articulus pedis mandibularis primus, et “palpus” articuli sequentes pedis reliqui.

Setæ antennarum plerumque valent ad species distinguendum, et præcipue illæ articulorum ultimorum. Articulos 2, 3, aut 4, ultimum præcedentes, *subultimos* sœpe vocamus; et eorum setæ, *anteriores* et *posteriorres*, scrutandæ et comparandæ.

Oculis inferioribus nullis.	Antennis anticis nec angulo flexis nec articulatione geniculatis.	Pedibus posticis (ct. xii.) non prehensilibus, saepe obsoletis.	Pedibus anticis (ct. vii.) majoribus quam maxillipedes (ct. vi.), lateraliter porrectis, non geniculatis.	1. CALANUS.
		Pedibus posticis elongatis, subulatis, uno subprehensili; pedibus anticis duplo geniculatis, sub corpore gestis, ad apicem deflexis.	Pedibus anticis minoribus quam maxillipedes; maxillipedibus sub corpore geniculatis; abdome longissimo.	2. SCRIBELLA.
				3. EUCHETA.
	Antennis anticis angulo levissime flexis, nunquam articulatione geniculatis; pedibus posticis <i>maris</i> prehensilibus.			4. UNDINA.
Oculis inferioribus et superioribus.	Antennâ <i>maris</i> anticâ dextrâ geniculante.	Maxillipedibus duplo geniculatis, inflexis, setis longis, nudis.	Maxillipedibus duplo geniculatis, inflexis, setis longis, nudis.	5. CANDACE.
		Max. rectis, setis longis, setulosis.	Max. rectis, setis longis, setulosis.	6. CYCLOPSINA.
				7. CATOPIA.
Oculis superioribus nullis, inferioribus grandibus; antennâ <i>maris</i> anticâ dextrâ geniculante; aliis <i>Calano</i> affinibus.	Antennâ <i>maris</i> anticâ dextrâ non geniculante, ambabus flexilibus, setis diffusis; pedibus posticis parvulis, unarticulatis.			8. ACARTIA.
		Antennâ <i>maris</i> anticâ dextrâ geniculante; setis non diffusis; pede postico dextro crasso, prehensili.		9. PONTELLA.

Genus I. CALANUS. (Leach).—*Rostrum* furcatum. *Antennæ anticae* sive leviter curvatae sive rectæ, *maris* non geniculantes. *Pedes postici* (ct. xii.) obsolescentes, *maris* non prehensiles. *Pedes antici* (ct. vii.) elongati, latè porrecti, maxillipedibus (ct. vi.) majores, non geniculati. *Oculi inferiores* nulli. *Cephalothorax* 4–5-articulatus. *Rami antennarum posticarum* subæqui, ramo breviore ad apicem 3 setis instructo, in dorso setigero.*—Hab. in maribus Atlantico et Pacifico.

SYN.—*Cyclops*, Müller.—*Calanus*, Leach.—*Cetochilus?* Roussel de Vauzime.
Sp. *C. rotundatus*, comptus, nudus, magellanicus, crassus, surcatus, arcuicornis, turbinatus, stylifer, curtus, scutellatus, pavo, levis, medius, placidus, recticornis, setuligerus, pellucidus, affinis, flavipes, tenuicornis, sanguineus, mundus, inauritus, simplicicaudus, appressus, communis, amœnus, bellus, gracilis, elongatus, attenuatus, rostrifrons, cornutus.

-
- * Species optimè distinguendæ sunt:—
1. Per gustum antennarum anticarum; etiam per discrimina setarum, præcipue apicalium et subapicalium; per longitudinem et numerum articulorum:
 2. Per structuram maxillipedium, et pedium anticorum:
 3. Per pedes posticos thoracicos:
 4. Per numerum segmentorum cephalothoracis, et characteres segmentorum antici posticique:
 5. Per stylos caudales et eorum setas:
- Articulatio cephalothoracis non character *generica*. Numerus segmentorum abdominis per ætatem variat, et vix valet *species* distinguere.

Genus II. SCRIBELLA. (*Dana*).—*Antennæ anticæ elongatæ, pauciarticulatæ, longè setigeræ, setis diffusis, maris non geniculantes. Antennæ posticæ simplices (?)*. *Maxillipedes* (ct. vi.) maximi, pedibus proximis maiores, 4-articulati, geniculati et prorsum flexi. *Oculi inferiores nulli. Cephalothorax 4-5-articulatus, capite non discreto. Abdomen valde elongatum, cephalothorace non brevius. Styli caudales oblongi, divaricati. [Sæpius, e basi pedis biremis, seta grandis laterali-ter porrecta.]*—Hab. in maribus Atlantico et Pacifico.

SYN.—*Scribella*, *D.*, Amer. Jour. Sci., Ser. 2da, i, 227.

Sp. *S. scriba*, setiger, abbreviata.

Genus III. EUCHÆTA. (*Philippi*).—*Frons acuta. Rostrum transversim emarginatum. Antennæ anticæ duplo leviter curvatæ, nunquam minimè angulo flexæ, maris non geniculantes. Pedes maris postici (ct. xii.) ambo valde elongati, subulati. Pedes antici (ct. vii.) maxillipedibus (ct. vi.) maiores, duplo geniculati et sub corpore gesti, penecillum setarum nudarum reflexum ferentes. Oculi inferiores nulli. Cephalothorax 4-5-articulatus, capite non discreto.*—Hab. in maribus Atlantico et Pacifico.

SYN.—*Euchæta*, *Philippi*, Archiv für Naturgeschichte, vol. ix, p. 55.—*Euchirus*, *Dana*, Amer. Jour. Sci., Ser. 2da, i, 228.

Sp. *E. communis*, concinna, pubescens, diadema.

Genus IV. UNDINA. (*Dana*).—*Antennæ anticæ ante medium angulo leviter flexæ, ad apicem fronte posteriores, maris non geniculantes. Pedes postici (ct. xii.) maris grandes, dextro subcheliformi. Pedes antici (ct. vii.) elongati, maxillipedibus sœpe maiores et valde porrecti, non geniculati. Oculi inferiores nulli. Cephalothorax 4-5-articulatus, capite non discreto.*—Hab. in maribus Atlantico et Pacifico.

Sp. *U. vulgaris*, simplex, inornata.

Genus V. CANDACE. (*Dana*).—*Frons quadrata. Oculi inferiores obsoleti. Antennæ anticæ regulariter et breviter setigeræ, transversæ; dextrâ maris articulatione geniculante. Maxillipedes (ct. vi.) pedibus proximis maiores, duplo geniculantes et inflexi, 4-articulati, setis nudis, longis. Pedes maris postici disparés, dextro prehensili. Abdomen mediocre. Styli caudales breves, setis strictè appressis. [Animal sæpius partim nigrescens.]*—Hab. in maribus Atlantico et Pacifico.

SYN.—*Candace*, *D.*, Amer. Jour. Sci., Ser. 2da, i, 228. 1846.

Sp. *C. ornata*, *pachydactyla*, *ethiopica*, *curta*, *acuta*, *truncata*.

Genus VI. CYCLOPSINA. (*Milne Edwards*).—*Rostrum surcatum. Antennæ anticæ sive rectæ sive leviter curvatæ, maris dextrâ articulatione geniculante. Maxillipedes (ct. vi.) pedibus proximis maiores, non geniculati, setis longis spinulosis instructi. Oculi inferiores nulli. Cephalothorax 4-7-articulatus, capite sœpe discreto. Antennæ posticæ iisdem *Calani* similes. Pes maris posticus dexter grandis et prehensilis. [Maxillipedes, et antennam maris anticam pedemque posticum dextrum, *Pontellæ* affinis; antennam posticam, oculos, et habitum, *Calano* similis. Si oculi inferiores adsunt, species *Pontellæ* pertinent.]*—Hab. in maribus Atlantico et Pacifico.

SYN.—*Cyclopsina* (*C. castor*), *Milne Edwards*.—*Cetochilus?* *Roussel de Vauzème*.—*Monoculus* (*M. castor*), *Jurine*.—*Cyclops* (*C. castor*), *Desmarest*.—*Diopтомus* (*D. castor*), *Westwood*.—Non *Cyclopsina* *Bairdii*.

Sp. *C. longicornis*, *calanina*, *tenuicornis*, *gracilis*.

Genus VII. CATOPIA. (*Dana.*)—Antennas posticas et antennarum habitum anticarum *Calano* affinis. Antennam *maris* anticam dextram *Pontellæ* affinis. Oculi superiores nulli; oculus inferior unicus (?)—Hab. in mari Sinensi.

Sp. C. furcata.

Genus VIII. ACARTIA. (*Dana.*)—Antennæ anticæ rectiusculæ, flexiles, setis irregulariter diffusis, dextrâ maris non geniculante. *Maxillipedes* (ct. vi.) pedibus proximis maiores, recti, setis setulosis longis instructi. *Pedes postici* (ct. xii.) parvuli, uni-articulati, 2 setas divaricatas gerentes. Oculi duo inferiores et duo superiores. *Setæ caudales* mediocres.—Hab. in maribus Atlantico et Pacifico.

Sp. A. limpida, negligens, tonsa, laxa.

Genus IX. PONTELLA.—*Rostrum* surcatum. Oculi duo superiores, pigmentis sive coalitis sive remotis; duo inferiores coaliti. Antennæ anticæ multiarticulatæ, setis non diffusis, antennâ dextrâ maris geniculante. *Cephalothorax* 4-7-articulatus, segmento cephalico sœpe discreto. *Maxillipedes* (ct. vi.) grandes, recti, setis longis, setulosis. *Pedes antici* (ct. vii.) minores. *Pes maris posticus* (ct. xii.) dexter crassus, prehensilis.—Hab. in maribus Atlantico et Pacifico.

SYN.—*Pontia*, *Milne Edwards.**—*Irenæus*, *Goodsir*.—*Broteas*, *Lovén*.

Sp. P. elliptica, brachiata, plumata, turgida, curta, contracta, media, crispata, detruncata, simplex, exigua, agilis, acutifrons, acuta, rubescens, emerita, regalis, perspicax, strenua, protensa, hebes, frivola, detonsa, argentea, speciosa, princeps, fera.

Familia IV. CORYCÆIDÆ.

Oculi duo grandes plus minusve remoti, lenticulis duobus prolatis maximis, et corneis oblatis instar conspicillorum, constructi; quoque duo oculi connati minutissimi. Antennæ anticæ pauci-articulatæ, simplicissimæ. Antennæ posticæ simplicissimæ. Pedes mandibulares maxilla-resque brevissimi. *Sacculi ovigeri* duo.

Genus I. CORYCÆUS. (*Dana.*)—Corpus crassum, anticè rotundatum. *Conspicilla* fronte affixa. Antennæ posticæ pedibus anticis maiores. Pedes antici sexu vix dissimiles digito subuncinato tenuique confecti. Abdomen pauci-articulatum, appendicibus basis nullis, stylis caudæ styliformibus.—Hab. in maribus Atlantico et Pacifico.

SYN.—*Corycæus*, *D.*, Proc. Acad. Nat. Sci. Philad., 1847; Am. Jour. Science, Ser. 2da, i, 228.

Sp. C. gracilis, decurtatus, deplumatus, varius, longistylis, obtusus, crassiusculus, laticeps, vitreus, agilis, orientalis, laetus, speciosus, remiger, latus, venustus, pellucidus, concinnus, productus, longicaudatus.

Genus II. ANTARIA. (*Dana.*)—Corpus crassum, antice rotundatum. *Conspicilla* fronte affixa. Antennæ posticæ parvæ, ad apicem breviter setigeræ, pedibus anticis (ct. vii.) non maiores, carpo posticè angulato. Pedes antici sexu vix dissimiles (?), digito tenui subuncinato. Abdomen pauci-articulatum. [Cephalothorax postice obtusus.]—Hab. in maribus Atlantico et Sinensi.

Sp. A. crassimana, gracilis, obtusa.

* *Pontia Papilionum* generis vocabuluni, itaque *Pontella* nobis scripsa.

Genus III. *COPILIA*. (*Dana*.)—*Corpus* *depressum*, fronte latè *quadratum*, et *conspicilla* ad *angulos anticos* gerens. *Antennæ posticæ* *digitiformes*, *digito elongato*, *subulato*. *Abdomen* *pauci-articulatum*, *appendicibus* ad *basin nullis*.—Hab. in mari Pacifico.

Sp. *C. mirabilis, quadrata*.

Genus IV. *SAPPHIRINA*. (*Thomson*.)—*Corpus* *depressum*. *Sexus* *antennas posticas* *stylosque caudales similes*, et *abdomen pedesque anticos* (ct. vii., *vere maxillipedes*,) *dissimiles*. *Antennæ posticæ* *pediformes*, *digito tenui*, *2-articulato*, ad *apicem unguiculato*. *Abdomen feminæ* *5-6-articulatum*, *thorace subito angustius*, *appendices breves ad basin latere gerens*; *maris* *4-5-articulatum*, *thorace subito non angustius*, *appendicibus nullis*. *Pedes maris antici* *digitum elongati*, *feminæ breves*. *Styli caudales laminati*.—*Mares* *sæpe latè opalini aut fulgidè metallini*, *interdum cœrulei*. *Feminæ sæpius incoloratae*, plus minusve *pellucidæ*; *interdum opacæ et azuleæ*.—Hab. in maribus Atlantico et Pacifico.

Sp. *S. iris, angusta, elongata, metallina, coruscans, inæqualis, ovata, splendens, ovalis, detensa, indigotica, orientalis, ovato-lanceolata, gemma, bella, opalina, versicolor, tenella, obesa, obtusa*.

Familia V. MIRACIDÆ.

Oculi *duo conspicillis maximis constructi*. *Antennæ posticæ* *ad apicem setigeræ*. *Pedes mandibulares maxillaresque brevissimi*. *Abdomen feminæ* (*an maris?*) *6-articulatum*. *Sacculus origerus unicus*.

Genus *MIRACIA*. (*Dana*.)—*Corpus* *elongatum*, non *depressum*, ad *frontem duas appendices falciformes subtus gerens*. *Antennæ anticæ* *appendiculatæ, flexiles et non geniculantes*. *Pedes antici* (ct. vii.) *mediocres, uni-unguiculati*; *pedes duo sequentes biremes, lateraliter porrecti*. *Pedes abdominis longè setigeri*. *Setæ caudales elongatae*.—*Setellæ affinis, sed conspicilla oculorum diversæ*.—Hab. in maribus Atlantico et Pacifico.

Sp. *M. efferata, gracilis*.

Tribus II. DAPHNIACEA (vel Cladocera).

Corpus testâ plerumque tectum, capite antennisque posticis sæpius exclusis. *Pedes plures natatorii*. *Antennæ anticæ* *sæpe obsoletæ, raro elongatae*. *Oculus compositus*. [Membra tota cephalothoracis mandibularia, maxillaria, pediformiaque, numero 12-16.]

Familiæ sunt:—

1. *PENILIDÆ*.—*Pedes duodecim*. *Antennæ anticæ obsolescentes*.
2. *DAPHNIDÆ*.—*Pedes decem*. *Antennæ anticæ sive obsoletæ sive uni-articulatæ*.
3. *BOSMINIDÆ*.—*Pedes decem*. *Antennæ anticæ elongatae, multi-articulatæ*.
4. *POLYPHEMIDÆ*.—*Pedes octo*. *Antennæ anticæ obsolescentes*.

Familia I. PENILIDÆ.

Genus *PENILIA*. (*D.*)—*Caput discretum, longè rostratum*. *Antennæ posticæ* *grandes, ramis duobus 2-articulatis*. *Abdomen non inflexum, stylis duobus corneis confectum*.—Hab. in maribus prope oras.

Sp. *P. avirostris, orientalis*.

Familia II. DAPHNIDÆ.

Genus I. DAPHNIA.—*Abdomen inflexum. Antennæ anticae obsolescentes. Antennæ posticæ birameæ, ramis 3-4-articulatis. Intestina non convoluta.*—Hab. in stagnis.

Sp. *D. textilis, australiensis, macrura.*

Genus II. SIDA.—*Abdomen rectum. Antennæ anticae fere obsoletæ. Antennæ posticæ birameæ, uno ramorum 2-articulato. Intestina non convoluta.*—Hab. in stagnis.

Sp. *S. angusta.*

Genus III. LYNCEUS.—*Abdomen inflexum. Intestina convoluta. Antennæ anticae fere obsoletæ. Antennæ posticæ parvæ.*

Sp. *L. latifrons.*

Familia IV. POLYPHEMIDÆ.

Pedes octo. Oculus maximus.

Genus POLYPHEMUS.—*Caput discretum magnum. Antennæ birameæ, validæ.*—Hab. in mari.

Sp. *P. brevicaudis.*

Tribus III. CYPRIDACEA (vel Ostracoda).

Corpus testâ bivalvi omnino tectum, posticè incurvatum, capite antennisque nunquam exclusis. Pedes nulli biremes nec natatorii. Oculi vel simplices vel compositi. Antennæ quatuor. [Membra cephalothoracis mandibularia, maxillaria, pediformiaque numero decem.]

Genus I. CYPRIS. (*Müller.*)—*Testa integra ad frontem nec personata nec incisa. Oculus unicus. Antennæ anticae setigeræ, subnatatoriæ. Antennæ posticæ subpediformes, setigeræ. Pedes mandibulares 3-5-articulati. Maxillæ quatuor, breves. Pedes quatuor, duo uncinis longè confecti, duo sequentes graciles, 4-5-articulati, ad ova pertinentes.*—Hab. in stagnis.

Sp. *C. speciosa, albida, chilensis, pubescens, vitiensis.*

Genus II. CYPRIDINA. (*Milne Edwards.*)—*Testa breviter rostrata corpus omnino tegens, et clausa. Oculi duo compositi, remoti. Antennæ anticae setis paucis inaequis ad apicem instructæ, setis rectis, saepè divaricantibus, vix natatoriis. Antennæ posticæ 5-7 articulis brevissimis longè et plumosè setigeris confectæ. Pedes mandibulares 5-articulati, digitiformes, apicem unguiculati. Maxillæ sex, breves, breviter setigeræ, paris secundi laminam ciliatam ad basin gerentes, setis longis, plumosis. Pedes duo, longissimè vermisformes, omnino flexiles, ad ova pertinentes, ad apicem setis spinulosis partim reversis armati. Abdomen spinulis biseriatis confectum.*—Hab. in maribus Pacifico et Atlantico.

Sp. *C. luteola, punctata, olivacea, gibbosa, formosa.*

Syn. *Asterope, Philippi.*

Genus III. CONCHÆCIA. (*Dana.*)—*Testa interdum breviter rostrata, corpus omnino tegens, fronte aperia. Oculi simplices. Antennæ anticae 3-4-articulatæ, apicem longè setigeræ. Spiculum inter antennas sarcosum, simplex, exsertile. Antennæ posticæ 5-7-articulatæ, articulis brevissimis longè setigeris confectæ, ramo altero brevi. Pedes man-*

dibulares fermè 5-articulati, non unguiculati, apice articuli primi interno et sèpius basi secundi interno simul corneis (instar mandibulæ) et denticulatis. *Maxillæ* quatuor. *Pedes* quatuor, tenues. *Abdomen* spinulis biseriatis confectum.—Hab. in maribus Pacifico et Atlantico.

Sp. C. agilis, rostrata, brevirostris, inflata.

SUBORDO 2. CORMOSTOMATA.

Os rostriformis.—Tribus quatuor sequentes :—

I. MONSTRILLACEA.—*Corpus elongatum* (Cyclopiforme). *Maxillæ* pedesque antici obsoleti. *Pedes postici octo natatorii*.

II. CALIGACEA.—*Corpus sèpius depresso*. *Maxillæ* pedesque toti numero 12–14, octo pedes ultimi plerumque natatorii, plurimi testâ tecti.

III. LERNÆACEA.—*Corpus depresso aut vermiciforme*. *Antennæ* pedesque partim obsoleti.

IV. NYMPHACEA.—*Corpus breve, araneiforme, abdomine obsolescente*.

Tribus I. MONSTRILLACEA.

Genus MONSTRILLA. (*Dana*).—*Cephalothorax* fere cylindricus, 4-articulatus. *Abdomen* 5–6-articulatum. *Antennæ* duæ. *Oculi* duo simplices; quoque oculus inferior sicut *Pontellis*. *Truncus buccalis* parvulus subconicus, maxillis pedibusve non munitus. *Pedes octo, natatorii*.—Hab. in mari “Sulu.”

Sp. M. viridis.

Tribus II. CALIGACEA.

Familiae quinque sequentes :—

1. ARGULIDÆ.—*Corpus* anticè latè peltatum. *Ovarium externum nullum*. *Pedes* antici largè tubulati, suctatori.

2. CALIGIDÆ.—*Corpus* anticè latè peltatum. *Ovarium externum tubiforme, rectum, ovis uniseriatis*. *Pedes* quatuor antici subprehensiles. *Antennæ* posticæ carapace tectæ.

3. DICHELESTIDÆ.—*Corpus depresso, valde angustum*. *Antennæ* posticæ carapace non tectæ. *Ovarium externum tubiforme, ovis uniseriatis*.

4. ERGASILIDÆ.—*Corycæis* affines. *Corpus* vix depresso, plus minusve Cyclopiforme. *Antennæ* posticæ carapace non tectæ. *Ovarium externum elongatum aut sacculiforme, ovis non uniseriatis*.

5. NICOTHOIDÆ.—*Corpus* plerumque Cyclopiforme, sed e lateribus longissimè alatum. *Ovarium externum sacculiforme, ovis non uniseriatis*.

Familia II. CALIGIDÆ.

Subfamiliae Caligidarum nobis sunt :—

1. CALIGINÆ.—*Truncus buccalis subovatus, obtusus*. *Maxillæ* truncо buccali remotiusculæ, posticè aculeo-elongatæ. *Tubum ovigerum externum rectum*. *Corpus* anticè latius. (Genera sunt *Caligus*, *Lepeophtheirus*, *Chalimus*, *Caligeria*, *Calistes*.)

2. PANDARINÆ.—*Truncus buccalis tenuis acuminatus*. *Maxillæ* ad truncum buccalem appressæ, parvulae, lamellatæ. *Tubum ovigerum externum rectum*. *Corpus* posticè interdum latius. (Genera sunt *Pandarus*, *Trebius*, *Nogagus*, *Specilligus*, *Dinematura*, *Phyllophora*, *Euryphora*, *Lepidopus*.)

3. CECROPINÆ.—Truncus buccalis tenuis, acuminatus. Maxillæ ad truncum buccalem appressæ. Tubum ovigerum externum sub testam convolutum. Corpus posticè latius. (Genera sunt *Cecrops*, *Læmargus*.)

Caligaceorum segmenta corporis auctoribus sæpe malè data. Segmentum *abdominis* anticum, ovarium externum gestans, *thoracis* posticum sæpe vocatum.* In Cyclopaeis Caligaceisque ovarium externum ad segmentum secundum *abdominis normalem* semper pertinet. His animalibus et Cyclopaeis Crustaceisque aliis comparatis, affinitates veræ eduentur. Tabula sequens, membris ordine enumeratis, hæc comparisonem exhibit.

0. Membra segmenti obsoleta.

00.. Segmentum ejusque membra simul obsoleta.

Subfamilia 1. CALIGINÆ.

Genus I. CALIGUS.—*Cephalothorax* 2-articulatus; segmento antico latè peltato, fronte discis duobus suctatoriis plerumque instructâ; pos- tico parvulo, non alato. *Oculi* simplices pigmento unico conjuncti. *Antennæ posticae* prehensiles, et extus basin spinâ crassâ sæpius munitæ. *Pedes* duo antici vergiformes, bifidi;† duo proximi sequentes subprehensiles digito acuto confecti; sex sequentes natatorii; duo reliqui sim- plices, vergiformes. Venter furculâ parvulâ armatus. *Abdomen* 2-3- articulatum, appendicibus caudalibus sublamellatis, marginem setigeris. [Sexus antennas posticas, pedes paris secundi et formam abdominis, valde dissimiles.]

Sp. C. thymni, productus, gracilis, (*Lepeophtheirus*) bagri.

* Vide "Hist. Nat. des Crustaces, par M. Milne Edwards," iii, 445 et seq.

† Extremitas bifida articulo tertio et apice secundi elongato composita.

Genus II. CALISTES. (*Dana.*)—*Caligo similis.* Cephalothorax 2-articulatus, segmento postico non alato. Pedes duo postici biramei, subnatatorii.

Trebio affinis, sed cephalothorax non 3-articulatus et maxillæ nec lamellares, nec ad truncum buccalem appressæ.

Sp. C. trigonis.

Genus III. CALIGERIA. (*Dana.*)—*Caligo similis.* Cephalothorax 2-articulatus, segmento postico bialato. Pedes duo postici biramei, setis brevibus, non natatoriis.

Sp. C. bella.

Subfamilia 2. PANDARINÆ.

Genus I. NOGAGUS. (*Leach.*)—Cephalothorax 4-articulatus, fronte arcuatâ, segmento secundo ad latera posticè producto, duobus sequentibus non alatis. Abdomen stylis brevibus sublamellatis setigerisque confectum. Oculi simplices, remotiusculi: (an quoque oculus subtilissimus intermedius?). Pedes paris secundi crassè cheliformes; pedes natatorii octo, grandes.

Sp. N. validus.

Genus II. SPECILLIGUS. (*Dana.*)—*Nogago* segmenta cephalothoracis pedesque affinis. Oculi duo remotiusculi, et *conspicillis* grandibus instructi, eisque Sapphirinæ similes.

Sp. S. curticaudus.

Genus III. PANDARUS. (*Leach.*)—Cephalothorax 4-articulatus, carapace grandi, segmentis sequentibus transversis, secundo ad latera alatè producto, tertio quartoque posticè alatis, et bilobatis. Abdomen 2-3-articulatum, segmento ultimo tecto, secundo posticè rotundato et utrinque stylis caudalibus sœpius munito. Pedes paris secundi crassè cheliformes; natatorii octo, setis brevissimis. Oculi duo, remotiusculi. Styli caudales styliformes, acuti, subnudi.

Sp. P. concinnus, satyrus, brevicaudus.

Genus IV. DINEMATURA. (*Latreille.*)—Cephalothorax 3-articulatus, segmento secundo parvo, testâ tertii dorsali posticè valde expansâ et profundè bilobatâ, eoque elytroideâ. Abdomen 2-articulatum, carapace paulo angustius, oblongum, segmento antico maximo, posticè bilobato, postico parvulo, celato. Styli caudales lamellati, terminales.

Sp. D. braccata.

Genus V. LEPIDOPUS. (*Dana.*)—Corpus anticè non latius. Cephalothorax 3-articulatus, carapace minore quam abdomen, segmentis duobus sequentibus posticè largè bialatis. Abdomen 2-articulatum, segmento postico parvulo, celato, antico maximo et posticè bilobato. Antennæ posticæ articulo tenui falciformi confectæ. Pedes paris secundi superficie terminali latâ prehensili squamatâ instructi. Pedes natatorii quatuor ultimi similes, latè lamellati.

Sp. L. armatus.

Tribus IV. NYMPHACEA.

Genus ASTRIDIUM. (*Dana.*)—*Pycnogono* affinis. Caput duobus maxillipedibus subtus instructum parvulis, debilibus, ad apicem obtusis, non prehensilibus. Pedes octo unguiculo confecti. Abdomen per breve.

Sp. A. orientale.

the carbonate of lime previously noticed, when the solution of this phosphate met with the silicates of potash or soda, whilst percolating amid the rocks, the silicates would be decomposed by the carbonic acid, and the phosphate of lime thrown down. We should expect,—in the same manner as carbonate of lime often replaces the original matter of a shell which has been decomposed and removed from the body of a rock, leaving those cavities commonly termed casts,—that phosphate of lime, in localities where from accidental circumstances it was somewhat abundantly filtering through rocks, would also enter these and other cavities, filling them under the needful conditions of deposit. In like manner as we find carbonate of lime separating itself from mud and silt in which it was disseminated, forming the nodules so common in calcareo-argillaceous deposits, should we also expect disseminated phosphate of lime to do the same under fitting conditions; so that it would not necessarily follow, however true in numerous cases, that nodules containing much phosphate of lime were coprolitic. We can readily imagine circumstances very favorable for the solution and spread of these phosphates amid layers of mud and silt. We find such phosphates surrounding some fossils, such as crustaceans from the London clay, leading us to infer a connexion between the animal matter and this substance.

8. *Arkose*, (Bib. Univ., March, 1848.)—The arkose of the Vosges, according to Delesse, is a metamorphic quartzite, consisting essentially of hyaline quartz and crystals of orthose (feldspar.)

III. ZOOLOGY.

1. *Conspectus Crustaceorum, &c.*, Conspectus of the Crustacea of the Exploring Expedition; by J. D. DANA,—continued.

CRUSTACEA ISOPODA.

Appendices abdominales, duobus posticis exceptis, plerumque branchiiformes, stylis caudalibus duobus aut nullis. Pedes thoracis 6 antici ad eandem seriem pertinent, 8 postici ad seriem alteram,* excepti in *Isopodis brachiatis*.)

I. ISOPODA BRACHIATA.

Pedes seriei posticæ sex.†—Species *Amphipodis* affines (principue Dulichiis); habitum Caprelloideæ; sæpius algas, corallinas, etc. a pedibus sex posticis affixæ cum corpore arrecto.

Familia 1. ARCTURIDÆ. (Idotæoideæ.)

Pedes sex postici inter sese unguiculati similes.—Abdomen paucarticulatum, laminis operculiformibus infra opertum (sicut Idotæis), stylis caudalibus carens.

* *Amphipodis* (etiam *Isopodis* rarissimis) series antica *octo* pedes, et *sex* posticæ; quoque, stylis caudales *sex*, et alii appendices abdominales *natatorii*. Hæc discrimina optima et non negligenda.

† Hæc charactere species illæ aliis *Isopodis* remotæ et *Amphipoda* osculant.

Genus 1. LEACHIA,* *Johnston*.—Pedes 8 antici ciliati, non unguiculati. Antennæ superiores perbreves, 4 articulatæ; inferiores longæ, pediformes, ungue 1–3 articulato confectæ. Segmentum thoracis quartum prælongum.

LEACHIA NODOSA.—Corpus tuberculosum. Segmentum thoracis quartum valde elongatum anticè latius et utrinque cuspidatum. Abdomen 2-articulatum, segmento primo transverso, secundo oblongo, prope apicem latiore, posticè rotundato, prope basin utrinque emarginato. Antennæ superiores tenues, articulis duobus inferiorum primis parce longiores; inferiores pediformes, 6-articulatæ, fere corporis longitudine, articulo quinto breviore quam quartus, sexto (ultimo) brevi, unguiformi, fere recto, infra parce setuloso.—Long. 6".

Hab. prope insulas Mangsee in freto Balabac.

Familia 2. TANAIDÆ.

Pedes 2 antici, manu validâ instructi, reliqui unguiculati, mediocres, sex posticis inter sese similibus. Abdomen 5–6-articulatum, appendicibus decem subnatatoriis, stylis caudalibus articulatis.

Genus 1. TANAIS, *Edwards*.—Corpus lineare. Caput per breve. Segmentum thoracis primum oblongum. Antennæ quatuor, breviusculæ, superiores flagello non confectæ. Abdomen 5–6-articulatum. Pedes antici breves, crassè cheliformes.

1. TANAIS BRASILIENSIS.—Pedes antici crassi, manu ad basin paulo angustiore, pollice non crassiore quam digitus. Antennæ primæ paulo majores, corpore quadruplo breviores, 5-articulatæ; secundæ 6-articulatæ, articulis duobus basalibus paulo crassioribus. Abdomen 6-articulatum, posticè rotundatum et medio apiculatum, segmentis subæquis, ultimo non majore, ad apicem apiculato. Styli caudales 6-articulati. Segmentum thoracis septimum sexto brevius.

Hab. in portu Rio de Janeiro.

2. TANAIS ELONGATUS.—Gracilior. Pedes antici crassi, manu ad basin non angustiore, pollice crassiore quam digitus intus angulato et setam gerente. Antennæ primæ 4-articulatæ; secundæ 4-articulatæ, paulo breviores. Abdomen pubescens, 6-articulatum, posticè rotundatum, segmento ultimo majore, semicirculari. Styli caudales biramei ramo longiore 2-articulato, altero 1-articulato. Segmenta thoracis quatuor postica subæqua, fere quadrata.

Hab. in mari Sulu.

Genus 2. LEPTOCHELIA, *Dana*.—*Tanai* similis. Pedes antici longissimi, tenuissimi, manu valde elongatæ. Antennæ superiores longæ, flagello confectæ. Abdomen 6-articulatum, stylis caudalibus articulatis.

LEPTOCHELIA MINUTA.—Corpus lineare. Pedes antici corpore valde longiores, manu fere corporis longitudine, digito polliceque tenuissimis, incurvatis, nudis, pollice prope apicem intus dentigero. Antennæ superiores corpore paulo longiores, basi elongato, 4-articulato, articulo secundo longiore, flagello 6–7-articulato, vix longiore quam articulus basalis secundus.

Hab. prope insulas “Viti” in mari Pacifico.

* Arcturo, antennis inferioribus flagello non confectis et segmento thoracis quarto prælongo, differt.

II. ISOPODA AMBULATORIA.*

Pedes seriei posticæ octo in his et totis Isopodis normalibus. Membra buccalia nullo modo suctoria. Abdominis appendices sexti sive operculiformes sive styliformes, nunquam ad natandum apti.

Familia 1. IDOTÆIDÆ.

Abdomen pauci-articulatum, articulo ultimo maximo, laminis duobus operculiformibus infra opertum, stylis caudalibus carens. Mandibulæ non palpigeræ.

Subfamilia 1. IDOTÆINÆ.

Pedes toti subsimiles, plerumque ambulatorii.

Genus IDOTÆA, *Fabricius*.—Segmenta thoracis subæqua. Antennæ externæ (vel inferiores) valde longiores, non geniculatæ, flagello multiarticulato confectæ. Abdominis opercula simplicissima, prope apicem articulati. Pedes quarti tertiique non valde inæqui.

1. IDOTÆA ARGENTEA.—Angusto-subelliptica anticè truncata vel obsoletè excavata, superficie æqua et lævis. Epimeræ latiusculæ. Abdomen 3-articulatum, segmentis duobus transversis, tertio oblongo, ad apicem paulo angustiore et truncato-rotundato, prope basin utrinque suturâ notato. Antennæ internæ dimidio basis externalium vix longiores. Antennæ externæ fere dimidii corporis longitudine, flagello 7-articulato, breviore quam basis, articulis 2 ultimis minutis.—Long. 5". Argentea et ad latera cærulescens.

Hab. in mare Pacifico, lat. aust. 77°, long. occid. 109°, super Porpitam.

2. IDOTÆA ANNULATA.—Angusto-subelliptica, fronte truncata, obsoletè arcuata, superficie annulatâ segmentis prominulis. Epimeræ latiusculæ. Abdomen 3-articulatum, segmentis duobus transversis, tertio oblongo, lateribus fere parallelis, ad apicem truncato cum angulis rotundatis, prope basin suturâ utrinque notato. Antennæ internæ dimidio basis externalium non longiores. Antennæ externæ fere dimidii corporis longitudine, flagello breviore quam basis, 7-articulato, articulis 2 ultimis non breviores.—Long. 9". Brunnescens.

Hab. in mare Antarctica.

3. IDOTÆA BREVICAUDA.—Angustè ovato-elliptica, anticè posticèque truncata et medio minutè apiculata. Caput transversum, posticè segmento proximo amplexum. Abdomen 3-articulatum, segmentis duobus breviter transversis, tertio oblongo, posticè paulo angustiore, angulis rotundatis, prope basin suturâ notato. Antennæ internæ dimidio basis externalium non longiores. Antennæ externæ dimidium corporis longitudine vix superantes, articulo secundo brevi et ad apicem externum producto, flagello 9-10-articulato, paulo longiore quam basis.—Long. 6"—9"". Brunnescens.

Hab. in portu " Rio de Janeiro."

Genus EPELYS, *Dana*.—Antennæ breves subæquæ, externæ non geniculatae, flagello non confectæ. Pedes subæqui, quarti tertiique non valde inæqui. Oculi minimi, remoti.

* "Isopodes Marcheurs," Edwardsii, *Arcturo*, *Leachiâ*, *Tanai* et affinibus exclusis.

EPELYS ANNULATUS.—Angusto-subelliptica. Caput transversum, mediâ fronte apiculatâ, angulis rotundatis. Segmenta thoracis transversa, subæqua, prominentia. Abdomen 2-articulatum; segmento primo brevissimo, fere obsoleto, valde angustiore quam secundum; secundo scutellato, posticè triangulato, obtuso, lateribus mediis fere parallelis. Antennæ breves, latitudine capitidis non longiores; internæ parce breviore, 4-articulatae; externæ 5-articulatae.—Long. $2\frac{1}{2}''$.

Hab. ad oras prope Valparaiso, super corpus speciei Asterias.

Genus **CLEANTIS**, *Dana*.—Antennæ externæ valde longiores, non geniculatae, 5-6-articulatae, flagello non confectæ. Pedes quarti paris tertii valde breviores, et parium quartuor ultimorum sensim longitudine incrementales. Abdominis opercula prope apicem articulata et ad articulationem laminam parvulam internam gerentia.

CLEANTIS LINEARIS.—Angusto-linearis, fronte truncata et parce excavata. Caput paulo transversum, posticè profundè arcuatum, segmento proximo amplexum. Oculi mediocres, reniformes, remoti. Segmenta thoracis paulo transversa. Abdomen 3-articulatum, segmentis duobus transversis, tertio linearis, angulis posticis truncatis, apice truncato aut obsoletè excavato, prope basin suturâ notato. Antennæ internæ parvulae, dimidio externalum valde breviores; externæ crassiusculæ, articulo ultimo ovato, pubescente. Pedes tertii primis duplo longiores.

Hab. ad oras prope Rio Negro Patagoniæ.

Genus **ERICHSONIA**, *Dana*.—Antennæ externæ valde longiores, geniculatae, 6-articulatae, flagello nullo. Pedes subæqui, similes.

ERICHSONIA ANGULATA.—Elongato-elliptica. Caput et segmenta thoracis ad margines angulata, transversa. Frons excavata, duobis tuberculis supra armata. Segmenta thoracis quatuor antica tuberculum medianum gerentia. Oculi laterales. Abdomen uni-articulatum, oblongum, subscutellatum, marginis sinuosum, posticè paulo latius, deinde triangulatum, obtusum. Antennæ internæ fere quadruplo breviores, 4-articulatae; externæ clavatae, dimidio corporis longiores, 5-6-articulatae, articulis tribus ultimis subæquis, penultimo breviore, ultimo obtuso clavato breviter hirsuto. Pedis articulus basalis crassus et tuberculatus.

Hab. in portu Rio de Janeiro.

Subfamilia 2. CHÆTILINE.

Pedes sexti longissimi, setiformes et multiarticulati, non unguiculati; septimi fere similes.

Genus **CHÆTILIA**, *Dana*.—Antennæ primæ super secundas insitæ; superiores longiores; inferiores flagello multiarticulato confectæ. Pedes septimi sextis valde breviores, non unguiculati, parce multiarticulati. Abdominis opercula prope apicem articulata et ad articulationem lamelam parvulam internam gerentia.

CHÆTILIA OVATA.—Ovata, posticè acuminata. Thorax 7-articulatus, segmento septimo parvulo et partim celato, sexto utrinque acuto. Abdomen 4-articulatum, tribus segmentis transversis, quarto angusto-triangulato, ad apicem subacuto et ciliato. Antennæ lateraliter reflexæ; superiores fere dimidii corporis longitudine, 5-articulatae, articulis duabus perbrevibus et crassis, tribus reliquis tenuibus, longis, ultimo extus subtiliter setuloso. Antennæ inferiores valde breviores, flagello fermè 10-articulato, articulis basis duobus ultimis anticè setulosis, posticè

pubescentibus. Pedes sexti corpore fere duplo longiores, minutè multiarticulati. Pedes septimi perbreves.—Long. 9".

Hab. in mari prope Rio Negro Patagoniae.

New Haven, October, 1849.

2. *Gammaracea*.—The following recent genus is not included in the Synopsis of *Gammaracea* given in this volume, p. 135.

" *EPHIPHORA*, White, (Phil. Mag., [3], i, 226, 1848.)—Head rather large; antennæ distant from each other, the upper pair with the basal joints very thick and corneous, inserted in a deep notch in front of head; two setæ at the end of each, the outer the thicker. Lower pair of antennæ with the basal joint somewhat elongated and furnished with hairs.

" Body much compressed, the lateral appendages on the first eight joints very large, and nearly concealing the legs; the appendage of the fourth joint much dilated behind at the end; eighth to eleventh joints slightly keeled on the back; appendages of the three last joints of the abdomen longish, with short spines on the edge behind.

" A genus allied to *Orchestia* and *Talitrus*.

" Sp. *Ephippiora Kröyeri*." * * * *

The description is hardly full enough to decide whether the genus is related most closely to the *Orchestidae* or *Gammaridae*. The large size of the basal joint of the upper antennæ, together with the large epimerals appear to show that it belongs with the *Callianassinae*; and it may be identical with one of the genera in which the superior antennæ are appendiculate.

J. D. DANA.

IV. ASTRONOMY.

1. *Elements of the planet Hygeia*, (Comptes Rendus, July 2, 1849.)—M. GASPARIS, of Naples, who discovered this planet April 12, 1849, has furnished the following elements of its orbit, derived from the observations of April 29, May 7 and 16, 1849.

Epoch, May 1, 1849.

Mean Anomaly,	.	326° 34' 22" 44
Longitude of perihelion,	.	242 47 3 .44
" " node,	.	285 32 29 .72
Inclination,	.	3 46 51 .27
Log. a ,	.	0.5192506
Log. e ,	.	9.2478343
Mean daily motion,	.	590" .3784

2. *Second Comet of 1849*, (Comptes Rendus, May 14, 1849.)—The telescopic comet discovered April 11, 1849, by Geo. P. Bond of the Cambridge (Mass.) Observatory, (vii, 449) was detected the same night by M. Schweizer of Moscow. From the observations of April 14, 20 and 24, M. Sonntag has computed the following parabolic elements:

Perihelion passage, 1849, June	.	8.20514 Berl. m. t.
Longitude of perihelion,	.	267° 7' 6"
" " asc. node,	.	30 32 36
Inclination,	.	66 54 5
Perihelion distance,	.	0.89391
Motion,	.	Direct.

These elements agree quite well with those of the second comet of 1748.
